JOB OBJECTIVE

Showcase a strong command of full-stack development, emphasizing the creation and optimization of cloud-native solutions tailored for enterprise environments, with a commitment to delivering high-quality software.

EDUCATION

B.Tech in Computer Science & Engineering

Anil Neerukonda Institute of Technology and Sciences,
Visakhapatnam, Andhra Pradesh
Jul 2020 – May 2023 | GPA: 8.8/10

Diploma in Computer Engineering

Government Polytechnic,
Visakhapatnam, Andhra Pradesh
Jul 2017 – May 2020 | GPA: 8.8/10

CORE COMPETENCIES

- Cloud Infrastructure Architecture
- AI-Assisted Software Development
- Microservices Design Patterns
- Agile Software Development
- DevOps and Automation Strategies
- Scalable System Optimization
- Performance Tuning Techniques
- User Interface Responsiveness

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, NoSQL, Python
Frameworks: Spring Boot, Microservices, Node.js, React, Flask, FastAPI
Databases & Messaging: MongoDB, AWS RDS, DynamoDB, Kafka, MQ
Cloud & DevOps: AWS (EKS, S3, Lambda, CloudWatch), Docker, Kubernetes, OpenShift, Jenkins, Terraform, CI/CD, Git
Tools & Monitoring: Postman, Dynatrace, Kibana, Prometheus, Grafana, Jaeger
AI-Native Development: ChatGPT, GitHub Copilot, Cursor, Claude

PERSONAL DETAILS

Address: Visakhapatnam, Andhra Pradesh, 530007

PROFILE SUMMARY

- Full-stack software engineer specializing in scalable, cloud-native enterprise applications**, with strong expertise in **Java, Spring Boot, React, AWS, Kubernetes, Docker, REST APIs, and Microservices**.
- Proven experience modernizing and migrating enterprise applications to AWS EKS**, driving containerization, deployment automation, CI/CD improvements, and cloud resource optimization to achieve faster releases, lower infrastructure costs, and improved reliability.
- Strong command of Microservices, RESTful APIs, event-driven architectures, and Apache Kafka**, building resilient distributed systems with a focus on scalability, performance, security, and maintainability.
- Strong problem-solving and systems troubleshooting skills**, with hands-on experience across backend, frontend, databases, cloud infrastructure, and observability; proficient in SQL optimization, production debugging, performance tuning, and root-cause analysis.
- AI-native engineering approach**, leveraging tools such as ChatGPT, GitHub Copilot, and Cursor for code generation, debugging, automated testing, code reviews, documentation, and exploring technical solutions to improve developer productivity.
- Effective cross-functional communicator and technical collaborator**, working across development, DevOps, security, and product teams to solve end-to-end technical challenges and deliver reliable solutions.
- Strong foundation in data structures, algorithms, and core computer science**, demonstrated through **800+ Leetcode problems and the Knight badge**, complemented by hands-on experience building and operating production-grade distributed applications.
- Recognized with the Infosys Insta Award** for rapidly scaling RTM development capabilities, delivering high-quality solutions, and winning a client Hackathon—demonstrating technical depth, adaptability, innovation, and consistent value contribution.

WORK EXPERIENCE

Aug'2023 to Present: Specialist Programmer at Infosys, Hyderabad, India

Key Result Areas:

- Led the end-to-end migration and containerization of enterprise applications to AWS EKS using Docker, Kubernetes manifests, load balancers, and CI/CD pipelines, accelerating deployments by approximately 40% and improving release reliability.
- Designed and developed scalable Spring Boot microservices and REST APIs, following clean architectural patterns and implementing OIDC-based authentication and secure inter-service communication.
- Built modular React components using advanced state management, code splitting, and lazy loading, improving frontend performance and reducing application load times by approximately 30%.
- Leveraged AI-assisted tools including ChatGPT, GitHub Copilot, and Cursor for code generation, debugging, test development, code reviews, documentation, and exploring technical solutions.
- Troubleshooted production issues across backend, frontend, databases, and cloud infrastructure, performing root-cause analysis using AWS CloudWatch, Kibana, and other observability tools and implementing fixes within SLA timelines.
- Optimized PostgreSQL and MySQL-compatible workloads on AWS RDS by tuning SQL queries, stored procedures, and indexing strategies, improving query performance by approximately 35% under high transaction volumes.
- Improved cloud cost efficiency by approximately 20% through AWS resource optimization and adoption of serverless computing models where appropriate.
- Improved application observability by integrating AWS CloudWatch, Dynatrace, Prometheus, Grafana, and Jaeger across multiple microservices, strengthening monitoring, distributed tracing, incident diagnosis, and system reliability.
- Collaborated with application, infrastructure, DevOps, security, and product teams to diagnose end-to-end issues, deliver reliable solutions, and standardize microservices development and deployment practices.

CERTIFICATIONS (Link)

- AWS Developer Associate
- Spring Microservices Certification
- React.js Certification

PROJECTS

Quick Chat (github.com/ashokram004/quickchat)

- Developed a real-time messaging platform utilizing Spring Boot and React, incorporating WebSocket technology to deliver instantaneous message updates with sub-second latency.
- Implemented secure user authentication using OIDC and JWT protocols, ensuring robust access control.
- Leveraged DynamoDB for scalable and low-latency storage and retrieval of messages, successfully managing over 10,000 messages and 500 authentications daily during rigorous load testing.

CodeAligner AI (github.com/ashokram004/code-aligner)

- Built an execution-aware AI code analysis system in Python that traced program logic, identified errors, and evaluated algorithm efficiency with high accuracy.
- Integrated Golden Solution comparisons from a curated Leetcode dataset to validate outputs and eliminate the inconsistencies of AI-only code assessment.
- Combined dataset-backed validation with Gemini reasoning, enabling precise detection of wrong results and providing consistent, improvement-oriented feedback to developers.
